Search for new physics and technological advancements from neutrino experiments at the high intensity frontier

PARTICIPANTS

PARTNERS

Researchers around the world are working together to shed light on the least understood of the currently known elementary particles, Neutrinos, which unfortunately, are extremely difficult to detect. With the support of the MSCA programme, the SENSE project researchers will work in the field of neutrino physics at the high intensity frontier. They will study the neutrino oscillations which are consistent with the mixing of three neutrino flavours in three mass eigenstates and small mass differences. The research will investigate the anomalies detected and search for sterile

<https://cordis.europa.eu/project/id/101086257>

PARTICIPANTS

PARTNERS

The project proposes the establishment of a vast pan-European, cross-sectoral & multidisciplinary network to develop, optimise and promote integrated approaches and innovative tools for the surveillance and control of mosquito vectors of emerging arboviruses. It brings together 21 institutions specialised in vector biology, social sciences & product development to stimulate research, strengthen capacities, promote career development and facilitate knowledge transfer.
