

Global Education Conclave

27th November 2020

TOPIC: STUDENT MOBILITY WITH FOCUS ON MEANINGFUL INTERNATIONALIZATION USING TECHNOLOGY

The new normal will bring about major changes in the education globally. Travel restrictions and uncertainties will hamper both incoming and outgoing mobility of students and university staff worldwide. To ensure continuity, it is therefore essential to reinvent and break free from classical ways of learning.

The Confederation of Indian Industry (CII), Global Education Conclave in partnership with Nuffic Neso India aims to bring together experts from academia, industry and government to share insights into how technology in education can effectively change and strengthen international education landscape between India and the Netherlands.

Technology can add to the growing importance of internationalization for the entire education spectrum. In this topic, Indian Business School (ISB), Nijmegen School of Management (NSM), Radboud University and Infosys will discuss about their institutional partnership, student mobility and if the future calls for adaptive measures in the form of blended learnings.
